

Al-Amin, Rasel A. Target engagement-mediated amplification for monitoring drug-target interactions in situ	40
Allan, Rebecca Novel and potent HDAC 11 selective inhibitor	41
Presenter: Hassan, Muhammad	
Araman, Can Deciphering a new pathogenic mechanism in multiple sclerosis (MS) via site-specific citrullination of antigens	42
Arizono, Satoshi Development of OFF-ON-OFF fluorescence-switchable probes for detection of protein degradation	43
Artarini, Anita The role of Hepatitis B virus X protein mutant T118N on cell cycle and apoptosis regulation in HepG2 cells	44
Artola, Marta New selective alpha-D-glucosidase inhibitor for diabetes mellitus type II	45
Baccile, Joshua A single-molecule FRET sensor for monitoring local stress in artificial protein hydrogels	46
Bakkum, Thomas Quantification of bioorthogonal stability in immune phagocytes using flow cytometry reveals rapid degradation of strained alkynes	47
Bantle, Tobias 3-Arylazopyridinium derivatives switchable with visible light	48
Bañuelos-Sanchez, Guillermo Synthesis and biological evaluation of specific inhibitors of human LINE-1 reverse transcriptase	49
Bassi, Zuni Targeting the inflammatory function of PCAF/GCN5 through a PROTAC approach	50

Benhamou, Raphael Localizing antifungal drugs to the correct organelle can markedly enhance their efficacy	51
Beyna, Mercedes Discovery of novel transcriptional regulation of NF- κ B signaling via phenotypic screening and chemoproteomics	52
Bhadoria, Rohit Rendering linker-extended constructs cell permeable while maintaining the phenotype	53
Bichmann, Maria A mass spectrometry approach to detect posttranslational modifications of soluble tau	54
Binns, Thomas Novel photosensitizers based on the Janelia Fluor® rhodamine scaffold	55
Bittner, Tamara Inositol pyrophosphates modulate calcium oscillations in MIN6 cells	56
Boby, Melissa The development of novel antibiotics: Rational design of MenE inhibitors	57
Breen, Meghan Garcinolic acid inhibits transcriptional activator interactions with the CREB Binding Protein KIX domain	58
Breinbauer, Rolf Palladium-mediated allylation of cysteine for site-selective bioconjugation	59
Brieke, Clara Efficient cosubstrate enzyme pairs for sequence-specific methyltransferase-directed caging of DNA	60
Brunschweiler, Andreas Synthesis strategies to genetically tagged small molecule libraries	61
Presenter: Klika Skopic, Mateja	

Bucevicius, Jonas		
Fluorescent probes for multicolour imaging of nucleus in living cells		62
Chang, Chih-wei		
High-throughput, in-situ photoaffinity tagging of biomolecules via Ru(bpy)₃²⁺ and two-photon microscopy		63
Cherukuri, Kesava Phaneendra		
Structure-function of Quinone-Methide (QM) enzyme substrates and inhibitors		64
Chikhale, Rupesh		
Molecular dynamics of R-spondin 1: conformation and druggability analysis		65
Chisholm, Tim	Presenter: Dowman, Luke	
Native chemical ligation–photodesulfurization in flow		66
Chojnacki, Jeremy		
Peptide-based PP1 activator localizes to the cellular membrane		67
Chong, Seung-Eun		
Penetration mechanisms of multimeric leucine-lysine based cell penetrating peptides		68
Chou, Chih-Hung		
A new environment-sensitive fluorophore for protein selective detection and fluorescence turn-on cell imaging		69
Coleman, Oliver		
Cyclic peptides for epigenetic reader domains		70
Collot, Mayeul	Presenter: Fam, Tkhe Kyong	
StatoMerocyanines: Ultrabright fluorophores for multicolor imaging and tracking of lipid droplets in cells and tissues		71
Conway, Louis		
Chemical probes for the selective detection of microbial biomarkers of disease		72

Cooney, Taylor Renée		
Antigen loading in synthetic vaccines – is more better?		73
Corkran, Hilary	Presenters: Corkran, Hilary; Muelbaier, Marcel	
Multiplexed Proteome Dynamics Profiling (mPDP) to characterize PROTACs derived using a modular approach		74
Corman, Alba		
Identification of chemical modulators of canonical protein translation		75
Cserép, Gergely Balázs		
Inherently fluorogenic dienes for bioorthogonal labeling schemes		76
de Vink, Pim		
A cooperativity paradigm for small molecule stabilization of protein-protein interactions		77
Dziuba, Dmytro		
Diazirine-based unnatural amino acids as chemical tools for RNA interactomics		78
Echalier, Cecile		
Development of click probes for target engagement measurement in single cells		79
Ellis, Katherine		
A systems biology approach indicates novel triazine compounds impact nuclear regulation		80
Ercan-Herbst, Ebru		
Characterization of post-translational signatures of Tau in Alzheimer's disease		81
Erdogan, Fettah		
Structural and functional studies of the human STAT proteins and their interaction with ligand molecules		82
Farrants, Helen		
Controlling a GFP-targeting nanobody with small-molecule drugs in live cells		83

Fauerbach, Jonathan	
Modulating the brightness and photo-stability of small organic fluorophores to optimize their performance in flow cytometry and fluorescence microscopy applications	84
Feng, Suihan	
Site-specific photoactivation to monitor local lipid metabolism and function	85
Fernandez, Antonio	
Chemical modulation of in vivo macrophage function with subpopulation-specific fluorescent prodrug conjugates	86
Fleming, Cassandra	
Development of release-and-report kinase inhibitors as molecular tools for investigating neurodegenerative disorders	87
Florea, Bobby	
Adaptation to proteasome inhibitors shapes the multiple myeloma proteome	88
Fottner, Maximilian	
Site-specific ubiquitylation and SUMOylation using genetic code expansion	89
Frei, Michelle Susanne	
Photoactivatable fluorophores for live-cell imaging	90
Fürst, Rita	
From a chelating, non-selective chemical probe to selective MMP-13 inhibitors for the treatment of osteoarthritis	91
Gambardella, Alessia	
Symbiotic prodrug–prodrug activation	92
Ge, Eva	
JARID2 activation of PRC2 precedes H3K27me3-driven spreading to initiate deposition of H3K27 methylation	93
Globisch, Daniel	
New chemical biology tools for biomarker discovery through investigation of gut microbiota and human host co-metabolism	94

Gmach, Joanna	Presenters: Gmach, Joanna; Blazewska, Katarzyna	
Design, synthesis and biological evaluation of potential covalent inhibitors of Rab geranylgeranyl transferase		95
Grenier, Vincent		
Genetic targeting of small molecule voltage indicators with SpyTag/SpyCatcher		96
Guardiola, Salvador		
Designed peptides as tools to modulate the activity of therapeutic targets		97
Haag, Simone		
Targeting STING with covalent small-molecule inhibitors		98
Hacker, Stephan		
Proteome-wide, residue-specific identification of covalently ligandable proteins		99
Hanna, Cameron		
Synthesis of self-adjuvanting TB vaccines using novel peptide ligation strategies		100
Hansen, Bente K.		
Mode of action of phenomycin		101
Harish, Mahalakshmi		
Folding, stability, domain architecture define sequence specificity and the functions of PSMD9, a proteasomal subunit		102
Harmel, Robert		
¹³C-Labeled myo-Inositol as a tool to interrogate inositol phosphate messengers		103
Hauke, Sebastian		
Trace amines and fatty acids are essential endogenous signaling factors for β-Cell activity and insulin secretion		104
Hauser, Anett		
Chemoselective tools to decipher lysine phosphorylation		105

Heck, Astrid pH-responsive antibody drug conjugate	106
Hegedus, Zsofia Ligand-directed dynamic combinatorial chemistry for inhibition of protein-protein interactions	107
Herzog, Doreen Mapping of the Fhit interactome	108
Hjerrild, Per Direct oxidative functionalization of p-quinones	109
Ho, Soo Yei ETC-535 – Discovery of a novel, orally bioavailable small molecule inhibitor of Wnt-porcupine	110
Höbenreich, Sabrina Directed evolution of an fell-dependent halogenase for asymmetric C(sp ³)-H chlorination	111
Hoffmann, Jan-Erik Non-canonical amino acids for photo-crosslinking and click chemistry	112
Hostachy, Sarah Efficient synthesis of non-hydrolyzable analogs of PP-InsPs using new P(III)CP(V) reagents	113
Hu, Hai-Yu Real time detection of ESKAPE pathogens by nitroreductase-triggered fluorescence turn-on probes	114
Hu, Hao Systematic proteomic analysis of protein methylation in prokaryotes and eukaryotes revealed distinct substrate specificity	115
Jensen, Thomas Chemical probes to detect nitric oxide in specific cellular compartments	116

Kalanjana Monnppa, Ajay Post translational modification analysis of Yersinia pseudotuberculosis pore forming toxin Cytotoxic Necrotizing Factor (CNFy) and their implications in cellular delivery	117
Kamps, Jos J. A. G. Structural and biochemical studies on isopenicillin-N synthase and substrate analogues	118
Kand, Dnyaneshwar Structure activity relationship for meso-substituted BODIPY photocages and tuning water solubility and cell permeability	119
Kang, Minji Development of PLGA particles containing Ca ²⁺ binding moieties for sustained release of anti-bacterial therapeutics	120
Karcher, Johannes Light-induced drug release from supramolecular hydrogels	121
Karpenko, Iuliia First red fluorogenic probes for background-free live-cell imaging of GPCRs	122
Kato, Yusuke Highly-tight translational switch controlled by unnatural amino acids	123
Kim, Gyu Chan Photo-switchable cell penetrating abilities of amphipathic peptides by control of alpha-helical conformation	124
Kirby, Ilsa Developing the first selective PARP11 inhibitor	125
Kirchner, Susanne Novel halogenated azobenzene derivatives for photocontrol of peptide-based systems	126
Kolanowski, Jacek Small molecule responsive probes for real-time investigation of biochemical analytes in biology	127

Kormos, Attila		
Bistetrazine-cyanines as double-clicking fluorogenic two-point binder or crosslinker probes		128
Koth, Christopher		
Tripping up bacterial LPS transport: Discovery and structural basis of MsbA antagonists		129
Kozlowski, Mark		
Controlled bacterial assembly accelerates activation of a quorum-sensing circuit		130
Krüger, Heike		
Optochemical nanotools for the in situ photopatterning in 2D and 3D		131
Krüger, Lena		
Identification of interaction partners of diadenosine tetraphosphates		132
Kulitz Marins, Andre		
Brazilian plants and its potential against cancer		133
Kumar, Brijesh		
Repressing to enhance: In vivo chemical screen identifies novel regulators of pancreatic alpha-cell fate and beta-cell regeneration		134
Kuriki, Yugo		
Establishment of molecular design strategy to obtain activatable fluorescent probes for carboxypeptidases		135
Kusy, Damian	Presenters: Kusy, Damian; Blazewska, Katarzyna	
Design, synthesis and evaluation of the first phosphonocarboxylate-derived affinity-based probes as tools for identification the place of interaction with RGGT and potential off-targets		136
Kuusk, Ave		
Stabilization of 14-3-3-p53 protein-protein interaction		137

Lehner, Maike Fluorescently labeled NAD ⁺ analogs for the investigation of Poly(ADP-ribosyl)ation in living cells	138
Lilienkampf, Annamaria H. Biocompatible in situ synthesis of bioactive small molecules	139
Liu, Shuang Elucidating the binding mechanisms of substrates and inhibitors of isocitrate dehydrogenase 1	140
Liu, Zheng The regulations of histone succinylation on nucleosome and chromatin dynamics	141
Longo, Beatrice Click pretargeted PET imaging using novel trans-Cyclooctene derivatives	142
Löwik, Dennis Multi-modality anti-PSMA ligands for intra operative tumor detection and targeted photodynamic therapy of PSMA-expressing tumors	143
Lukinavicius, Grazvydas Biocompatible probes for imaging of cellular structures	144
Manoharan, Ganesh babu Development of fluorescence-based assays to screen for calmodulin inhibitors as K-ras stemness-signaling disruptors in cancer	145
Marculescu, Cristina Chemical strategies to label TCR-based therapeutics	146
Marques, Marta Towards understanding the complexity of molecular interactions: a structure-based approach to develop high-affinity leads	147
Maulide, Nuno FR252921: Total synthesis and cellular targets identification	148
Presenter: Chen, Yong	

Miller, Sophie		
Investigating local translation in neurons using a fluorescence assay to detect ribosome interactions with mRNA (FLARIM)	149	
Mock, Elliot		
Discovery and characterisation of an in vivo active NAPE-PLD inhibitor	150	
Modi, Gyan		
Development of novel dual acting neuroprotective agents for the treatment of Alzheimer's Disease	151	
Mostafavi, Anahita		
Assembling modified proteins using split inteins and amber suppression	152	
Mueller, Rainer		
Synthesis and application of tri-functional phosphoinositides	153	
Murtaza, Iram		
Vascular calcification and cardiac valves regurgitation regulation by the interplay of cellular programming players	154	
Narayanan, Natasha		
Chemical anchoring strategies to preserve RNA signal for in situ transcriptome measurement	155	
Neamtu, Andreea-Adriana		
Bilberry extracts & chromosome condensation and modulatory segregation. Towards the understanding of stochastic action of natural remedies in metabolic syndrome and type II diabetes in <i>Drosophila melanogaster</i>	156	
Németh, Krisztina		
Bioorthogonally applicable fluorescent dyes with large Stokes-shifts for STED microscopy	157	
Nguyen, David Ton		
Identifying mediators of stress-dependent activation of autophagy in Pink1 deficiency	158	

Nguyen, Tuan-Anh		
Genetic encoding of a bifunctional photocrosslinking amino acid to study protein-protein interactions in mammalian cells		159
Nilov, Dmitry		
First selective inhibitors of transketolase from Mycobacterium tuberculosis targeted towards both the pyrophosphate binding site and an adjacent hydrophobic site		160
Oh, Jae Hoon		
Rapid and efficient intracellular protein transport at nanomolar concentrations by multimeric amphipathic α-helical sequences for transcriptional control		161
Olaoye, Tobi		
A potent, isoform selective, and metabolically stable HDAC inhibitor		162
Oller-Salvia, Benjamí		
Genetic encoding of a cyclopropene derivative for the efficient generation of antibody-drug conjugates		163
Pankratz, Jennifer		
Novel antibody fluorochrome conjugates for multiparameter flow sorting enable relabeling of cell epitopes in downstream applications		164
Park, Hankum		
Label-free target identification reveals oxidative DNA damage as the mechanism of a selective cytotoxic agent		165
Pierotti, Catia		
Using chemical probes to investigate the necroptosis pathway		166
Pomorski, Adam		
Where fluorescent proteins and classical fluorescent probes fails there is a biarsenical alternative for protein labeling and control of their activity		167
Prothiwa, Michaela	Presenters: Prothiwa, Michaela; Böttcher, Thomas	
Competitive protein profiling for the discovery of in situ inhibitors of quinolone biosynthesis		168

Qadree, Abdul		
Structural insights into role of STAT5 variant in disease		169
Qing, Yujia		
Directional control of a processive molecular hopper on the protein surface		170
Rana, Rahul		
New cytometry applications of novel DAPI derivatives		171
Reichert, Dennis		
Design and application of a photo-controlled mRNA-cap guanine-N7 methyltransferase		172
Retnoningrum, Debbie		
Construction of ccdB-carrying plasmids and determination of their performance in Escherichia coli		173
Rezelj, Saša		
Archaeal lipids vesicle system for use in synthetic biology		174
Ricken, Julia		
Photoswitchable cell adhesion mediated by LOV2 protein mutants		175
Robalo, Joao		
The multiple origins of the hydrophobicity of fluorinated apolar amino acids		176
Rubino, Frederick		
Membrane potential is required for MurJ function		177
Rutkowska-Klute, Anna		
A click probe-based approach for visualization of drug-target interactions at single cell level		178
Rütschlin, Sina	Presenters: Rütschlin, Sina; Böttcher, Thomas	
NRPS-independent siderophore sythetases and the engineering of macrocyclic hydroxamate siderophores		179

Sainlos, Matthieu Directed evolution and engineering of FN3-derived PSD-95 PDZ domains binders	180
Sakamoto, Shingo Development of novel fluorogenic substrates to detect enzymatic activities in biological sample at single protein level	181
Salim, Aleksandar Development of fluorogenic probes for live cell labeling of centrosomes	182
Scheidler, Christopher Establishing a genetic code expansion system in <i>Bacillus subtilis</i>	183
Schneider, Melanie Improving ligand screening by exploiting structure ensembles and machine learning	184
Scroggie, Kymberley R. Site-selective silicon incorporation for direct fluorine labelling of proteins	185
Sedlák, David Estradiol dimer inhibits tubulin polymerization and microtubule dynamics	186
Sethi, Deepak Ranjan Carbon routing in <i>Phaeodactylum tricornutum</i>	187
Sharma, Neelam DJ1 alleviated parkinsonian mimetic induced loss of mitochondrial function in Parkinson's disease	188
Shin, Younghee Discovery of neuro-protective small molecule regulating proteostasis in tauopathy mouse model	189
Shulov, Ievgen Tubulin labeling via ligand-directed chemistry for the imaging in living cells	190

Singh, Avinash Kumar		
Structural and functional characteristics of a new class of housekeeping sortase		191
Siphthorp, James		
Chemical biology approaches to assist the development of NOTUM inhibitors		192
Skorupskaite, Aiste		
Structural and functional characterisation of cytidine monophosphate N-acetylneuraminic acid hydroxylase		193
Söveges, Bianka		
Tracking down protein-protein interaction via FRET-system using site-specific thiol-labeling		194
Standke, Lisa		
De-risking a novel antibiotic by elucidating the toxicity of a sulfamoyladenine motif		195
Steck, Nicole		
Chemoenzymatic synthesis of modified PolyP		196
Stephan, Milena		
Quantitative analysis of native lipid dynamics and lipid protein interactions in living cells		197
Strasser, Ralf		
Investigation of Polymerase/DNA interactions and enzymatic activity with switchSENSE		198
Svatunek, Dennis		
Bioorthogonal dual-labeling		199
Svenningsen, Esben		
Covalent interactions of non-tetramic 5-hydroxy-3-pyrrolin-2-ones		200
Szamosvári, Dávid	Presenters: Szamosvári, Dávid; Böttcher, Thomas	
4-Quinolones of Pseudomonas aeruginosa and their synthetic derivatives: signals, weapons, drugs?		201

Tan, Minjia Protein acylation is a general regulatory mechanism in biosynthetic pathway of Acyl-CoA derived natural products	202
Tan, Zhi-wei Structural-based evolution of O-linked GlcNAc transferase inhibitors	203
Tian, He A ultra-wide field imaging-based platform for engineering improved optogenetic tools	204
Tirukoti, Deva Nishanth Molecular design of MRI-based sensors for mapping of labile Zn ²⁺ in biology	205
Trebacz, Malgorzata Photocaged PP1 disrupting peptides for temporal control of PP1 activity	206
Tu, Hsiu-Chung Direct screening of glycan patterns from human sera: A selective glycoprotein microarray strategy	207
van den Kerkhof, Danique Disagregin: A platelet aggregation inhibitor from the tick <i>Ornithodoros Moubata</i>	208
van der Wel, Tom Precise gene editing allows visualization of kinase engagement by complementary chemical probes in human cells	209
Van Dort, Marcian E. SAR studies of ZSTK474 derivatives: Effect of morpholine group replacement on PI3-kinase isoform inhibition and selectivity	210
Vázquez, Olalla Optochemical control of methyltransferase activity	211
Velikova, Nadya Putative histidine kinase inhibitors with broad-spectrum antibacterial effect	212

- Vogel, Antonia
Keeping muscle proteins in shape – Delineating the substrate-targeting mechanism of UCS proteins that function as myosin-specific quality-control factors 213
- Wang, Qinghua
Novel fluoromodule-based probes for in vivo fluorescence imaging and drug evaluation of bacterial infection 214
- Watson, Emma E. Presenter: Duggan, Nisharnti M.
Anophelin sulfoproteins as potent thrombin inhibitors 215
- Wegner, Seraphine
Bacterial Photolithography: Patterning biofilms with high spatiotemporal control using photocleavable adhesion molecules 216
- Winter, Georg
Probing oncogenic gene control via target protein degradation 217
- Wirth, Regina
SiRA – A NIR fluorophore binding aptamer for no-wash and quencher-free visualization of RNAs in living cells 218
- Wouters, Simone
DNA-based control of antibody activity 219
- Wright, Megan
Chemical tools reveal the bacterial sensor of a human peptide hormone 220
- Wu, Fang
Bioresponsive Co-delivery of FGF-2 and IGF-I based on genetic incorporation of clickable unnatural amino acids 221
- Xiang, Li
Chemical approaches to unravel regulation and function of novel histone modifications 222
- Xu, Jun-Yu
Characterization of the lysine acylomes and the substrates regulated by protein acyltransferase in *Mycobacterium smegmatis* 223

Xu, Lujuan		
A novel allyl-sulfone-tetrazine intercalator for site-selective modification of proteins		224
Xu, Yingke		
Walking down insulin signaling network using optogenetics and dissecting PI3K and Akt in adipocyte insulin action		225
Xu, Yongjin		
Towards photoswitchable kinase inhibitor: Synthesis and photophysical characterization of Azoheteroarenes		226
Yamazaki, Nozomi		
Development of hybrid probe for fluorogenic imaging of endogenous membrane proteins		227
Yuan, Yizhi		
Investigation of the role of Ap3A in AMPylation context		228
Yushchenko, Dmytro		
Inhibition of α-synuclein amyloid fibril elongation by blocking fibril Ends		229
Zegota, Maksymilian M.		
“Tag and Modify” protein conjugation with dynamic covalent chemistry		230
Zhang, Hongjie		
A role of glycosphingolipids in tube morphogenesis and neuronal polarity in <i>C. elegans</i>		231
Zhang, Leilei	Presenter: Hu, Hai-Yu	
A multifunctional theranostic platform based on aminoglycosides for bacterial diagnostic and therapeutic applications		232
Zhang, Qingyang		
Novel probes with thermally activated delayed fluorescence and two-photon fluorescence for bioimaging		233
Zhdanova, Hanna		
Green photocaged amino acids for the optical control of peptide GPCRS		234

Zhussupova, Aizhan
Improved technology for production of highly effective substances from
Limonium gmelinii plants 235

Zhussupova, Aizhan
Antiinflammatory action of "Limonidin" 236
