

Anwer, Abdul Hakeem	
Bioelectrochemical reduction of carbon dioxide to biofuel using a microbial consortium bacteria	22
Bar-On, Yinon	
The global mass and average rate of Rubisco	23
Bernhardsgrütter, Iria	
Awakening of sleeping carboxylases: engineer the natural CO₂-binding potential of the propionyl-CoA synthase	24
Burgener, Simon	
Engineering synthetic metabolic pathways for the assimilation of formate	25
Carrillo Camacho, Martina	
In vivo implementation of natural and synthetic CO₂ fixation cycles	26
Diehl, Christoph	
Towards artificial chloroplasts: the design, realization and optimization of the synthetic CO₂ fixation cycle CETCH	27
Lindner, Steffen	
Reductive activity of 6-phosphogluconate dehydrogenase offers a new carbon fixation route	28
Luo, Shanshan	
Design and construction of a synthetic CO₂ fixation cycle in vitro	29
Marchal, Daniel	
Enzyme engineering of a non-native Carboxylase	30
McLean, Richard	
HOPAC: realising and optimising pathways for synthetic carbon fixation	31
Miller, Tarryn	
Shedding light on CETCH: linking synthetic carbon fixation pathways to the energy produced by light powered thylakoids.	32

Naseri, Gita	
COMPASS: rapid combinatorial pathway optimization method based on artificial transcription factors	33
Pfister, Pascal	
Establishing a synthetic photorespiratory bypass in <i>Synechococcus elongatus</i>	34
Roell, Marc-Sven	
FormatPlant: towards CO2 neutral photorespiration in plants	35
Sánchez-Pascuala, Alberto	
From the tube to the "bug": making possible the in vivo implementation of synthetic CO2 fixation pathways.	36
Schada von Borzyskowski, Lennart	
The beta-hydroxyaspartate cycle, a forgotten pathway for glyoxylate assimilation and carbon-neutral photorespiration	37
